3.b ▲ If user unable to clear area

If the user is unable to clean the area themselves, they can submit the location along with the photo. The location is sent to the local Municipal Corporation (MNC) or authorities responsible for area maintenance.

Sent location

to MNC

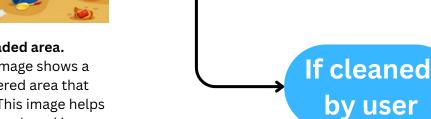

1. User Finds a Dirty area and click photo of it.

The user identifies a dirty or garbage-filled area while traveling. They initiate the process by clicking a photo of the littered location using the platform.

2.▲Garbage spreaded area.

The uploaded image shows a polluted or littered area that needs attention. This image helps in identifying and tracking unhygienic zones in tourist places or public spots.

3.a ▲ User clean the area.

If the user decides to clean the area themselves, they are encouraged to do so. After the cleaning is complete, they can upload a 'cleaned' photo for validation.

4▲Area cleaned

Whether cleaned by the user or by authorities, the area is now clean and safe for all travellers.

This helps in maintaining environmental quality and improving tourist experience.

5. User get coins

Once the system confirms the clean-up (either by the user or by MNC), the user is rewarded with virtual coins for their initiative and contribution.

6 . Redeem Rewards

The coins earned by the user can be used to redeem various travelrelated rewards such as discounts, gift cards, merchandise, or travel perks, encouraging sustainable actions.
